The following is a first action on the merits of application Serial No.10/748,220, filed December 31, 2003.

Allowable Subject Matter

Claims 1-14 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior art of record fails to show or render obvious a clutch control method as defined in claim 1 and particularly including the steps of generating a target value of the pressure inside the work chamber, estimating the actual value of the pressure in the work chamber and calculating the control signal for controlling the solenoid valve using both feedback control of the position of the hydraulic actuator and feedback control of the pressure of the fluid inside the work chamber.

The art of record also fails to show or teach the control unit as defined in claim 10, and especially including a second sensor for estimating an actual value of the fluid pressure inside the work chamber and a regulator for generating a target value of the pressure inside the work chamber, the controller calculating the control signal for controlling the solenoid valve using both feedback control of the position of the hydraulic actuator and feedback control of the pressure of the fluid inside the work chamber.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

Receipt is acknowledged of the Information Disclosure Statement filed June 29, 2004. The cited documents have been considered.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoshikawa et al.(US 2002/0055415 A1) is cited to show the actuation system of Fig. 2 wherein actuator position and system pressure are sensed. Smedley('274) shows feedback control of the actuator position combined with feedback control of "clutch pressure". Leimbach et al.(GB 2 301 404 A) corresponds to the German document cited by applicant. Kennedy(US 2005/0043139 A1) shows a clutch control that generates a target position signal and a target pressure signal.
